

ECO- Top dresser for sports ground

The ECO 250 Top Dresser was developed based on our own experience as lawn care professionals and also incorporates suggestions from our customers. This spreader integrates features normally found in much larger top dressers into our own proven design.

- The ECO 250 Top Dresser's maneuverable four-wheel design provides better weight distribution and stability. This makes handling heavier products feasible without sacrificing maneuverability or ease of operation.
- A wider base frame improves stability and accommodates a wide conveyor system for increased surface contact.
- An extra differential support bracket has been added in order to handle greater weight.
- All levers and handles have been re-positioned for ease of use and comfort.
- Four tie-down points have been integrated into the new design.

- A quick adjustment agitator belt tensioner system makes it easy to adapt on the go.
- The larger frame gives the hopper a wider live bottom. This feature works together with its steep smooth sides and large rounded corners and edges to eliminate product bridging.
